

NON-FERROUS STRANDS CONCENTRIC AND BUNCHED

PHOSPHOR BRONZE, COPPER

ENAMELLED COPPER STRANDS & BRAIDS

We manufacture to order Wire Strands in many metals, in many sizes and constructions.

These are used in engineering where non-magnetic material is required, the electronic trade for use as antennae and conductors.

In the lighting industry where low voltage lighting cables are used, these have a Kevlar core for strength and lightness. We can also plastic coat to order.

The enamelled strands and braids are insulated and mostly used in transformer manufacture.

Please contact us with all your requirements for specialist cables. We also keep ex-stock stainless steel and galvanised wire ropes.
